**Respond to
Threats in
Real Time**

**Complete
Protection**

What is a Security Operations Centre?

A Security Operations Centre (SOC) is a centralised facility designed to analyse, manage and assess every aspect of an organisation's cyber security programme. Creating your own in-house Security Operations Centre is a huge undertaking, and before embarking on such an ambitious project, you'll need to prepare a comprehensive budget. To ensure the full financial support of your executive management team, it's imperative that you consider several key elements:

- The initial investment required for building the SOC (construction costs, equipment, staffing).
- Recurring expenses for operating the SOC (salaries, maintenance & upkeep, utilities, training).
- A buffer for any unexpected expenses (new technologies, staff replacements, repairs).

What You'll Need...

+10
Employees

Total Cost
£500,000

Our Advanced Threat Detection & Response Capabilities

**Highly Trained
SOC Analysts**

Starting At

£36,000

That's

24 / 7 / 365
Protection
For less than the cost of
One Employee

THE KEY FEATURES OF OUR SECURITY OPERATIONS CENTRE

Intrusion Detection & Prevention Systems

With round-the-clock monitoring and real-time analysis, our specialist SOC team can prevent network violations and threats to your security. Cyber criminals are continuously updating their tactics, techniques and procedures, and to keep the hackers at bay our highly skilled team is always on the lookout for new cyber threats.

SIEM & Log Management

Our managed Security Information and Event Management system (SIEM) is a 24/7 cyber threat protection service, designed to monitor your infrastructure, systems, network and web applications for potential security breaches.

Threat Mining

Using cutting edge tools and techniques our specialist SOC analysts will perform a deep dive into an ocean of machine data generated by your organisation's assets, services and endpoints, uncovering threats that would otherwise go undetected.

Endpoint Detection & Response

Threats are constantly evolving to evade traditional endpoint prevention and protection tools. DigitalXRAID provides a fully managed EDR solution to every SOC customer. This eliminates the cost and complexity of yet another point solution added to your security stack. The EDR solution allows us to react and respond to threats whenever and wherever they unfold.

Dark Web Monitoring

Our SOC analysts utilise industry-leading technology to monitor known locations on the dark and inaccessible corners of the internet to weed out any potential threats to your organisation.

File Integrity Monitoring

Cyber attackers will often attempt to modify your critical system files in order to gain a foothold on your network and infrastructure. File Integrity Monitoring allows our SOC team to quickly detect and respond to any threats, keeping your data safe and secure at all times.

Continuous Vulnerability Monitoring

By employing sophisticated monitoring techniques, our specialist SOC team can provide up-to-the-minute risk analysis, identify any potential threats or weaknesses and deploy robust countermeasures.

Reporting

It's vital to keep your network updated with all the latest security protocols. Our SOC analysts are on hand 24/7 to interpret the results of vulnerability scans and provide expert advice and guidance.

“ We are immediately made aware of any security threats and know they are being investigated by DigitalXRAID, eliminating the risk of lasting damage to our business. ”

Compliant With:

Expert Knowledge

Our cyber security experts are some of the best in the business. We'll safeguard your digital assets and shield you from every conceivable online threat.

The Personal Touch

Here at DigitalXRAID, we understand that no two companies are the same. With our dedicated, custom-made service, we'll provide the best possible cyber security programme for your business.

“ 24/7 protection gives us the peace of mind that the business is safe even when we aren't at work ”

24 Hour Protection

Cyber criminals don't sleep and neither do we. Our Security Operations Centre provides round-the-clock protection 24 hours-a-day, 365 days-a-year.

Peace of Mind

When you choose DigitalXRAID, you're choosing the best. With our dedicated, industry-leading cyber security service, you'll have the peace of mind that your digital assets are in the safest possible hands.

Staying Two Steps Ahead of the Hackers

Cyber criminals are always looking for new and inventive ways to bypass your security. Using state-of-the-art, up-to-the-minute security techniques, we'll identify potential threats and prevent security breaches before they happen.
