What is **ISO 27001**?

ISO 27001 is an internationally recognised information security standard, which outlines the requirements for implementing, maintaining and continually improving an Information Security Management System within any business or organisation.

Is a Managed Service **Right for Me?**

Here, at DigitalXRAID, we provide a fully managed ISO 27001 service, taking you through the entire process up to certification. This includes an initial GAP analysis, implementation of ISO 27001, right up to the certification stage 2 audit.

Once you achieve your ISO 27001 certification, our teams will continue to provide ongoing support and advice, safeguarding your information assets and ensuring you continue to meet and exceed all the ISO 27001 requirements.

In need of a **Fully Managed Service?**

Call us on **0800 090 3734**
to see how we can help you.

Why do I Need ISO 27001?

An Information Security Management System (ISMS) is central to the success of any enterprise, big or small. Comprising a number of key information security policies and procedures and is designed to protect all company data, identify potential threats and ensure continuity in the event of an information security breach.

Without ISO 27001 it's impossible to implement and maintain an effective ISMS, putting your business, your employees and your clients at risk. ISO 27001 is considered the global benchmark when it comes to information security, so, if you want to safeguard your business and demonstrate to shareholders, clients and other key stakeholders that you're doing everything in your power to protect your information assets, an ISO 27001 certification is an absolute must.

“ As they are providing us with a managed service, they regularly visit us and are always available to call. The managed service is perfect for organisations such as ours, as it takes away the strain and allows the DigitalXRAID team to manage and maintain our compliance to ensure certification is retained. ”

YOUR FIVE STEPS TO CERTIFICATION

Our fully managed ISO 27001 service consists of five key actions:

info@digitalxraid.com

STEP ONE >

Gap Analysis

Our expert team will perform a GAP analysis in order to assess your information security management system, highlighting any areas you need to improve in order to become ISO compliant and ISO certified.

STEP FOUR >

Stage 2 Audit

The UKAS accredited awarding body will conduct a stage 2 audit which demonstrates the businesses compliance to the ISO 27001 standard. This audit is completed by interviewing employees to validate their awareness of information security. Assuming you meet all the necessary criteria during this visit, you'll be awarded your ISO certification.

STEP TWO >

Implementation

Based on the outcome of the Gap Analysis, our team of experts will work with you to design and implement an Information Security Management System that is unique and works for your business. The ISMS will be developed in line with your company's current policies and procedures. **We'll provide all the mandatory documentation and deliver ongoing support to ensure you achieve ISO certification.**

STEP FIVE >

Management & Maintenance

Our team of information security experts will manage and maintain your Information Security Management System alongside your business. This is done by conducting monthly audits against the 114 controls of the ISO 27001 standard, managing information security risks and managing continual improvement. Our team will be available to provide ongoing support and advice to ensure your information assets remain safe and secure.

STEP THREE >

Stage 1 Audit

Our team will arrange for an external UKAS accredited awarding body to conduct a Stage 1 audit within your business. This will validate your internal documentation and processes in line with the ISO 27001 standard prior to the stage 2 audit. Any areas of improvement identified will be managed with yourself and our team of experts.

Get Accredited

We'll guide you through the process step by step, from the initial review to your annual audits and maintenance, making sure you meet all the criteria necessary to achieve ISO 27001 certification.

Be Compliant

With our in-depth GAP analysis, our expert team will assess your readiness, determine areas of weakness and recommend improvements to ensure the certification process runs smoothly and successfully.

Achieve the Highest Standard

ISO 27001 is the highest standard of information security, demonstrating your commitment to safeguarding your business and your clients' data, distinguishing your company as an industry leader in information security protocols.
