CYBER SECURITY**

OrbitalX

YOUR SECURITY PORTAL

**Get Full Visibility
of Your
Cyber Security**

**Prove The Value
of Your Security
Programs**

**Mitigate risks
in a timely
manner**

What is OrbitalX?

A lack of visibility of your overall cyber security can make your business vulnerable to attack. With a decline in available cyber skillsets, teams and business units operating in silos, and an inability to communicate the value of your cyber programs to senior management and stakeholders, gaps appear which cybercriminals can exploit, and investment cannot be secured.

" 68% of all businesses feel as though their cyber security risks are increasing "

The OrbitalX security portal exists to remove these pain points and give you back the primary control to protect your business. By providing a holistic view of your cyber security universe, you are able to:

- Address the gap between how services are delivered, and how issues and vulnerabilities identified are assigned and addressed in a timely manner

- Report on the value that security programs are bringing to the business, with specific and concise reports designed for senior management stakeholders. This elevates the awareness of the excellent work that the team are doing and aids securing budget for further security programs in the future

- Build a roadmap to complete protection, taking the journey to incorporate further services as you build your cyber security universe

What Makes DigitalXRAID's OrbitalX Portal Right for You?

The OrbitalX security portal is a central hub providing better visibility for a more holistic view of security, so your business can be better protected from cyber criminals. Plus the security portal will enable you to manage risk appropriately and communicate with senior management on risk levels and mitigation. Senior leaders get clear ROI visibility, and IT and security teams can better articulate the benefit of cyber security programs to senior management to aid in securing future funding.

OrbitalX is designed for all IT Teams and senior stakeholders within any business. Without needing deep technical knowledge or duplicating work across multiple tools, the entire business can gain clear visibility and report on their cyber security and risk profile, in a way that everyone can understand.

Prevent Vulnerabilities

OrbitalX will prevent vulnerabilities and other security issues from being missed and ensure that any identified issues are dealt with in a timely manner, plus clearly report on any missed issues or resource constraints which prevent the issues being addressed. This shores up security and prevents those issues being exploited.

Clear Reporting For All

The security portal enables reporting which can be easily consumed by different areas around the business, from senior stakeholders needing to understand that the overall business is being taken care of - to the technical teams who want to understand their current threat levels.

Gain Granular Threat Intelligence

Get granular real-time threat intelligence for your business and in the context of your industry, in a digestible dashboard format, providing visibility on how you have performed against threats and what your top threats are.
