

Airmic Case Study

Service:
Penetration Testing

How Airmic maintain business security and compliance to safeguard their organisation against attackers.

The Requirement

Airmic is a platform for professionals to access training and research, share information and ideas, and encourage best practice in the risk management and insurance community.

They provide a platform where professionals can remain in touch and communicate with each other, sharing ideas and information. Their mentoring scheme is designed to help members develop their professional skillset and learn new techniques to progress their careers.

It is vital that their cyber security is robust, with no vulnerabilities a hacker could exploit. They can easily become a lucrative target for hackers looking for sensitive data. Due to compliance regulations, they need to implement annual Penetration Testing to maintain business security and to safeguard their organisation against attackers.

Cyber attack and ransomware are frequent and growing risks for cloud-based organisations, where customer data can be held hostage and there is no guarantee it will be released, even if an organisation meets the hackers' demands.

Airmic understand that the nature of their business means they are constantly at risk: an annual Penetration Test is not just about ticking compliance boxes; it ensures ongoing cyber protection, showing they care about their clients' privacy and data.

The Solution

DigitalXRAID have been Airmic's security partner since 2017, providing cost-effective solutions that are offered at a reduced rate per annum in recognition of Airmic's loyalty.

We know that long-term partnerships are most effective where cyber security is concerned.

We have consistently offered a quick service, delivering accurate and meaningful results. All our reports are presented in an easy to understand format, and we are always happy to answer any questions.

By choosing an ongoing solution, any cyber security vulnerabilities can be picked up and remedied. Airmic can now be confident that their cloud-based organisation is a secure space for their clients and their data. It gives peace of mind to them and their members.

"We chose DigitalXRAID because of their reputation for delivering a well-organised, comprehensive and professional service.

DigitalXRAID were communicative and approachable, making sure that we understood the processes and structure of the Penetration Test, and answering any questions as they arose.

DigitalXRAID offered an ongoing cost-efficient service which provided us with the peace of mind that our organisation would be protected, and our members' information would remain secure within the cloud-based community."
